

Cracking the Code of Digital Money

A Data Detective's Journey into PhonePe Transactions

Unified Mentor Internship Project | Guided by DataCliq

Making the invisible visible

Every single day, millions of people tap "Pay" on their phones. But what happens to all that information?

- My mission as a **Data Analyst** was to act like a **digital detective**.
- **Goal:** Take a giant, confusing pile of digital receipts and turn it into a clear story about how people spend their money.

A massive ocean of digital money

101K

Total Transactions

₹528.97M

Total Money Moved

96.15%

Unique Users

We aren't just looking at a few purchases. We are mapping the digital heartbeat of India over an entire year.

The Data Refinery Engine

1. The Sifter

(Excel & Python)

Cleaning the messy dirt.
Fixing broken numbers and
deleting mistakes.

2. The Organizer

(SQL)

Sorting the clean data into
neat, perfectly organized
digital boxes.

3. The Illuminator

(Power BI)

The magic lens. Turning
boring boxes of numbers into
colorful, interactive pictures.

The dashboard built from this engine allows businesses to make smart choices instead of just guessing.

Learning the Data Lingo: Volume vs. Value

Volume (How Many?)

Lots of tiny actions. The number of times people hit the "Pay" button.

Value (How Much?)

Huge chunks of money. Even if it only happens once, the total amount of cash is massive.

To truly understand a business, a data detective must track BOTH the candy and the cars!

The Timeline of Taps

Transactions Over Time

The Weekday Warrior

Highest volume of taps. People are busy paying bills, transferring money to colleagues, and managing daily life.

The Weekend Rest

Transactions slow down. The data shows people take a break from digital spending on their days off!

Insight: Weekdays are the true engine of the digital economy.

The Digital Generation

When we look at WHO is moving this ₹528 Million, a clear winner emerges.

Insight: The platform is largely driven by young adults managing their primary financial lives.

The Daily Habits (High Volume)

Total Transaction by Service Type

Just like buying a piece of candy, these are things people do constantly. Paying for TV, scanning a quick code at a shop, or sending a few rupees to a friend. Millions of taps, but smaller amounts of actual money.

The Heavy Lifters (High Value)

This is where the real money moves. A user might only take out a loan once a year, but that single action moves more money than a thousand daily QR scans.

Meet the Power User

Age Profile: Millennial

Active Hours: Tuesday - Thursday

Primary Action: Scanning QR codes for lunch (**High Volume**)

Secret Weapon: Paying off big loans through the app (**High Value**)

The 'Aha' Insight

PhonePe isn't just a digital wallet for buying snacks. It has secretly become a massive virtual bank where active young professionals go to manage their biggest financial decisions.

From Clues to Action

1. Track Behavior

Knowing that weekends are slow, the company can launch **weekend-special offers** to boost taps.

3. Monitor Health

Keeping an eye on the **100K+ successful transactions** to ensure the system never breaks.

2. Identify Winners

Seeing that **'Loans' move the most money**, they can build better loan features.

4. Decide the Future

Data-driven decisions mean the company **grows faster, smarter, and safer**.

Analytics isn't just about making pretty charts—it's about giving businesses a superpower to see the future.
