Storytelling

What is actually inside our daily drinks?

The Mess

Raw Nutritional Data

The image shows a large, messy spreadsheet of raw nutritional data. A magnifying glass is focused on a specific row, highlighting the following values: 80.327, 3.93, 1.4285, 4.633, 0, 3792, 1.1837, 1.1717, 2.66. The spreadsheet contains many other rows and columns of data, some of which are crossed out or have question marks, indicating a messy and unorganized dataset.

The Mission

Find the hidden extremes: Highest sugar, calories, and caffeine.

Clean and organize thousands of rows of messy information.

Build an interactive tool that lets business owners answer their own questions instantly.

A menu is just a giant list of numbers. My job as a Data Analyst is to act as a detective—cleaning up the clues and building a dashboard that tells the true story behind the counter.

The Insight Brewery Pipeline

The Menu by the Numbers

Across a massive global menu, we tracked every single ingredient.
Here is the baseline of the average order.

33

Beverage Categories
Analyzed

32.90g

Average Sugar

193.78

Average Calories

95mg

Average Caffeine

Translating the Averages into Real Life

The Sweet Tooth

32.90g of sugar is roughly the same as eating 8 sugar cubes in a single sitting.

The Energy Buzz

95mg of caffeine is the perfect amount to fuel one highly focused homework session.

The Calorie Burn

194 calories gives you enough fuel for about a 20-minute continuous jog.

By turning abstract data into real-world analogies, we help customers and business owners instantly grasp the impact of their choices.

Catching the Heavy Hitters

The Caffeine Champion

Winner: White Chocolate Mocha

Business Insight: Highest caffeine concentration. Perfect for early morning promotions or targeted marketing for night-shift workers.

The Calorie Champion

Winner: Smoothies

Business Insight: Smoothies pack the heaviest caloric punch, outranking Signature Espressos and Tazo Teas. Crucial for health-conscious menu labeling.

From Raw Numbers to Better Decisions

Data Engineering

Transformed messy, unstructured menu data into a clean, reliable, and automated single source of truth.

Visual Storytelling

Replaced confusing spreadsheets with an intuitive “Digital Menu Board” that anyone from a CEO to a 5th grader can read.

Business Value

Delivered dynamic analytics that allow executives to make instant, data-driven decisions on product marketing, health labeling, and menu development.

Great data analysis doesn't just display numbers—it brews insights that fuel connection.
